The only true way to protect your trailer bearings is to secure them in The VAULT.
The Vault
Hybrid Lubrication Systems

The VAULT “Hybrid Lubrication System” uses a semi-fluid oil in a pressurized chamber to give you the ultimate in wheel bearing lubrication and protection. At ambient temperatures the oil is thick with a viscosity approaching grease. As the bearing temperature rises during towing, the VAULT’s Hybrid Oil thins out replenishing the bearings with lubricant and dissipating heat. No inspection, no maintenance and no service required.

BENEFITS & FEATURES
• 10 Year (unlimited miles), warranty available
• Pressurized sealed chamber means nothing gets in or out
• Stainless steel components, high temperature piston
• Hybrid oil constantly replenishes the lubricant to the bearings
• Bearings run cooler due to reduced friction
• No visual inspection required
• No access hole in wheel centers allows for better looking wheels
• No maintenance/service provides lower operating costs
